## Amendment of the Claims

This listing of the claims will replace all prior versions and listing of claims in the application.

## Listing of Claims

- 1. (Currently Amended) A process for the combustive destruction of noxious substances in a gas stream which comprises injecting the gas stream in to a heated chamber 3 with sufficient oxygen to allow substantially complete combustion therein wherein the chamber is at a temperature of less than 1000°C and, wherein hydrogen is also present in the chamber as a fuel gas.

- 3. (Cancelled)
- 4. (Cancelled)
- 5. (Cancelled).
- 6. (Cancelled)
- 7. (Cancelled)
- 8. (Cancelled).
- 9. (Cancelled)

- 10. (Currently Amended) The process according to claim 1 in which oxygen is present in an amount of the mixture has a 10 to 150% stoichiometric excess of oxygen over the fuel gas.
- 11. (Currently Amended) The process according to claim 10 in which <u>oxygen is</u>

  <u>present in an amount of the mixture has an 80 to 150% stoichiometric excess of oxygen</u>

  over the fuel gas.
- 12. (Currently Amended) The process according to claim 11 in which the hydrogen is present in at least the stoichiometric amount by volume in respect of the <u>noxious</u> substance species being combusted.
- 13. (Currently Amended) The process according to claim 12 in which the hydrogen is present in at least twice the stoichiometric amount by volume in respect of the <u>noxious</u> substance species being combusted.
- 14. (Currently Amended) The process according to claim 12 in which the hydrogen is present in at least five times the stoichiometric amount by volume in respect of the <a href="mailto:noxious substance">noxious substance</a> species being combusted.
- 15. (Currently Amended) The process according to claim 13 in which the hydrogen is present in at least five times the stoichiometric amount by volume in respect of the <a href="mailto:noxious substance">noxious substance</a> species being combusted.
- 16. (Original) The process according to claim 1 in which the chamber comprises a heated metal tube.

- 17. (Original) The process according to claim 16 in which the chamber is heated by electrical means.
- 18. (Original) The process according to claim 17 in which the hydrogen and the oxygen 2 are introduced into the gas stream prior to the stream being injected in to the chamber.
- 19. (Currently Amended) The process according to claim 18 in which oxygen is present in an amount of the mixture has a 10 to 150% stoichiometric excess of oxygen over the fuel gas.
- 20. (Currently Amended) The process according to claim 19 in which <u>oxygen is</u> present in an amount of the mixture has an 80 to 150% stoichiometric excess of oxygen over the fuel gas.
- 21. (Currently Amended) The process according to claim 20 in which the hydrogen is present in at least the stoichiometric amount by volume in respect of the <u>noxious</u> substance species being combusted.
- 22. (Currently Amended) The process according to claim 21 in which the hydrogen is present in at least twice the stoichiometric amount by volume in respect of the <u>noxious</u> substance species being combusted.
- 23. (Currently Amended) The process according to claim 21 in which the hydrogen is present in at least five times the stoichiometric amount by volume in respect of the <a href="maxious substance">maxious substance</a> species being combusted.

- 24. (Currently Amended) The process according to claim 22 in which the hydrogen is present in at least five times the stoichiometric amount by volume in respect of the <a href="mailto:noxious substance">noxious substance</a> species being combusted.
- 25. (Original) The process according to claim 1 in which the chamber is heated by electrical means.
- 26. (Original) The process according to claim 25 in which the hydrogen and the oxygen are introduced into the gas stream prior to the stream being injected in to the chamber.
- 27. (Currently Amended) The process according to claim 26 in which <u>oxygen is</u> present in an amount of the mixture has a 10 to 150% stoichiometric excess of oxygen over the fuel gas.
- 28. (Currently Amended) The process according to claim 27 in which <u>oxygen is</u> present in an amount of the mixture has an 80 to 150% stoichiometric excess of oxygen over the fuel gas.
- 29. (Currently Amended) The process according to claim 28 in which the hydrogen is present in at least the stoichiometric amount by volume in respect of the <u>noxious</u> substance species being combusted.
- 30. (Currently Amended) The process according to claim 29 in which the hydrogen is present in at least twice the stoichiometric amount by volume in respect of the <u>noxious</u> substance species being combusted.

Appln. No. 10/002,668 Atty Docket M00B130

- 31. (Currently Amended) The process according to claim 29 in which the hydrogen is present in at least five times the stoichiometric amount by volume in respect of the <a href="mailto:noxious substance">noxious substance</a> species being combusted.
- 32. (Currently Amended) The process according to claim 30 in which the hydrogen is present in at least five times the stoichiometric amount by volume in respect of the <a href="maxious substance">noxious substance</a> species being combusted.
- 33. (New) The process according to claim 1 wherein the chamber is at a temperature of up to 750°C.
